PROFESSIONAL SUMMARY

Analyst with 2 years of experience working directly with clients and a product team on an enterprise analytics platform. I started at Inxite Out as a Data Analyst on Mahindra & Mahindra's voice-of-customer research and one of my findings led them to move the urea tank on the Bolero. Six months in I pitched an AI chatbot to our leadership, wrote the BRD and FRD, ran the sprints and the UAT and was promoted. It cut data extraction time by 83% and took roughly 80% of the repetitive prep work off a 3-person team. Strongest at requirement gathering, stakeholder management and turning what a client asks for into SQL, Python and Power BI work. Available immediately; my MBA is part time and online.

PROFESSIONAL EXPERIENCE

Inxite Out

Remote|Feb 2024 - Aug 2025

Data Engineer (Analytics Delivery)

Aug 2024 - Aug 2025

- Promoted from Data Analyst after pitching RIA, an AI chatbot, to the CEO, CTO and COO. Wrote the BRD and FRD, ran the gap analysis against what clients kept asking for by email and did the UAT before launch.
- Cut YouTube data extraction from a 30+ minute manual process to about 5 minutes with RIA (an 83% reduction) that took roughly 80% of the repetitive data-prep effort off the team.
- Built a ground-truth evaluation dataset and ran A/B testing and manual QA with the data-entry team to validate RIA's accuracy, hitting 80%+ across sentiment, classification and numeric-answer benchmarks. Stress-tested it on a single video with 10,000+ comments and sustained 95%+ successful extraction.
- Ran sprint planning and daily standups with engineering, took RIA through all four rollout phases — internal testing, analyst pilot, controlled expansion and team-wide adoption — shipped bulk URL upload after the MVP and scoped expansion beyond YouTube into Instagram, X, Reddit, Facebook and Team-BHP.
- Handled requirement gathering and stakeholder management with the Mahindra & Mahindra client teams across 20+ vehicle-launch analyses, each covering 20,000+ comments on 50+ channels including competitor cars and built the reporting in Power BI.
- Owned the data behind RIA so clients could self-serve sentiment questions instead of raising tickets, taking 50+ ad-hoc report requests a month off the team and implemented authentication and project-level access controls to secure client research data.
- Diagnosed and recovered a production incident when a YouTube API change broke extraction, restoring service with no data loss. Wrote the Azure Databricks notebooks in Python, PySpark and Spark SQL, integrated the OpenAI and Google Cloud Translation APIs, and deployed through Azure DevOps, tracking work in Notion.

Data Analyst

Feb 2024 - Jul 2024

- Worked on Mahindra & Mahindra's voice-of-customer research, turning recorded customer interviews into transcripts using OpenAI Whisper and structuring the data in Python before building client-ready reporting in Excel dashboards and Power BI.
- Customers kept raising the urea tank position on the Bolero in their comments; I flagged it in the reporting and Mahindra moved it to the other side of the car.

Data Analyst Intern - Insight Consultants

Bengaluru|Jul 2023 - Jan 2024

- Extracted data with SQL and built reporting dashboards in Power BI, Python and Excel with Google Sheets trackers; cleaned and validated large business datasets and caught data quality issues before they reached anyone outside the team.

Career Transition & Upskilling

Bengaluru|Aug 2025 - Present

- Left data engineering on purpose. The part of the job I was good at was working out what the client actually needed, so I have been aiming at business analyst work instead.
- Went back and wrote up RIA's product discovery, PRD and user stories as a self-directed exercise, published on GitHub, alongside finishing MySQL for Data Analytics, Microsoft Business Analysis Fundamentals, and Jira, Confluence and Visio, plus starting an MBA in Digital Transformation at BITS Pilani, part time.

SKILLS

Business analysis: Requirement gathering, BRD/FRD, PRD authoring, user stories, gap analysis, UAT, A/B testing, ground-truth evaluation, sprint planning, agile delivery, stakeholder management, KPI tracking, incident management, root cause analysis, process improvement, data validation, documentation

Data & reporting: SQL, Spark SQL, Python, PySpark, Advanced Excel, Excel dashboards, Power BI, Google Sheets, Azure Databricks, data cleaning, scalability testing

AI: OpenAI API integration, LLM-based sentiment and text analysis, prompt engineering, AI evaluation (ground-truth datasets, A/B testing, hallucination mitigation), Google Cloud Translation API, NLP, OpenAI Whisper, ChatGPT, Claude

Platforms & tools: Microsoft Azure, Azure DevOps, Notion, GitHub, Jira, Confluence, Visio, authentication and access-control systems

EDUCATION

MBA, Digital Transformation - BITS Pilani (part-time, online)

2026 - 2028

Bachelor of Engineering - Jawaharlal Nehru National College of Engineering

2018 - 2022

Data Science Programme - Skill Sequel

2022 - 2023
