

BASAVA SANKETH B N

Product Analyst / Product Operations

Bengaluru, Karnataka|basavasankethbn@gmail.com|+91 96115 52705|linkedin.com/in/basavasankethbn|github.com/sankethbn

PROFESSIONAL SUMMARY

Analyst with 2 years of experience sitting between clients and a product team on an enterprise analytics platform. I started at Inxite Out as a Data Analyst on Mahindra & Mahindra's customer research and one of my findings led them to move the urea tank on the Bolero. Six months in I pitched an AI chatbot, wrote the BRD and FRD, ran the sprints, the UAT and the accuracy evaluation and was promoted. It cut data extraction time by 83%, removed roughly 80% of the team's repetitive prep work and took 50+ report requests a month off us. Strongest at finding where a process wastes time, working out what users need and answering it with SQL, Python and Power BI. Available immediately; my MBA is part time and online.

PROFESSIONAL EXPERIENCE

Inxite Out

Remote|Feb 2024 - Aug 2025

Data Engineer (Analytics Delivery)

Aug 2024 - Aug 2025

- Promoted from Data Analyst after pitching RIA, an AI chatbot, to the CEO, CTO and COO. Wrote the BRD and FRD, ran the gap analysis on what clients kept asking for and did the UAT before launch.
- Cut YouTube data extraction from a 30+ minute manual process to about 5 minutes with RIA (an 83% reduction) that removed roughly 80% of the repetitive data-prep effort across the team.
- Built a ground-truth evaluation dataset and ran A/B testing and manual QA with the data-entry team to validate RIA's accuracy, hitting 80%+ across sentiment, classification and numeric-answer benchmarks. Stress-tested it on a single video with 10,000+ comments and sustained 95%+ successful extraction.
- Took RIA through all four rollout phases — internal testing, analyst pilot, controlled expansion and team-wide adoption — ran the sprint planning and standups with engineering, shipped bulk URL upload after the MVP and scoped multi-source expansion beyond YouTube into Instagram, X, Reddit, Facebook and Team-BHP.
- Owned the data behind RIA so clients could self-serve sentiment questions instead of raising tickets. That removed 50+ ad-hoc report requests a month and became the usage signal we tracked the feature on. Implemented authentication and project-level access controls to secure client research data.
- Ran 20+ vehicle-launch analyses for Mahindra & Mahindra, each covering 20,000+ comments on 50+ channels including competitor cars. Handled stakeholder management with the client teams directly and worked out what they wanted to know first, then built the KPI reporting in Power BI.
- Diagnosed and recovered a production incident when a YouTube API change broke extraction, restoring service with no data loss. Wrote the Azure Databricks notebooks in Python, PySpark and Spark SQL, integrated the OpenAI and Google Cloud Translation APIs and deployed through Azure DevOps, tracking work in Notion.

Data Analyst

Feb 2024 - Jul 2024

- Ran the analysis pipeline for Mahindra & Mahindra's customer research: transcribed interviews using OpenAI Whisper, wrote the Python to structure the output, and delivered findings through Excel dashboards and Power BI.
- The urea tank position on the Bolero kept coming up in customer feedback. I flagged it in the reporting, and Mahindra moved it to the other side of the car.

Data Analyst Intern - Insight Consultants

Bengaluru|Jul 2023 - Jan 2024

- Extracted data with SQL and built reporting dashboards in Power BI, Python and Excel with Google Sheets trackers; cleaned and validated large business datasets and caught data quality issues before they reached anyone outside the team.

Career Transition & Upskilling

Bengaluru|Aug 2025 - Present

- Left data engineering on purpose. The work I was good at was spotting where a process was wasting time and getting a fix built, so I have been aiming at product analyst and product operations roles.
- Rebuilt RIA's product discovery, PRD and user stories as a self-directed case study, published on GitHub, while completing MySQL for Data Analytics, Microsoft Business Analysis Fundamentals, Jira, Confluence and Visio, and starting an MBA in Digital Transformation at BITS Pilani, part time.

SKILLS

Product: Customer and user research, competitor analysis, requirement gathering, BRD/FRD, PRD authoring, user stories, sprint planning, agile delivery, phased rollout, UAT, A/B testing, ground-truth evaluation, KPI tracking, incident management, root cause analysis, process improvement, stakeholder management

Data & reporting: SQL, Spark SQL, Python, PySpark, Advanced Excel, Excel dashboards, Power BI, Google Sheets, Azure Databricks, data cleaning, scalability testing

AI: OpenAI API integration, LLM-based sentiment and text analysis, prompt engineering, AI evaluation (ground-truth datasets, A/B testing, hallucination mitigation), Google Cloud Translation API, NLP, OpenAI Whisper, ChatGPT, Claude

Platforms & tools: Microsoft Azure, Azure DevOps, Notion, GitHub, Jira, Confluence, Visio, authentication and access-control systems

EDUCATION

MBA, Digital Transformation - BITS Pilani (part-time, online)	2026 - 2028
Bachelor of Engineering - Jawaharlal Nehru National College of Engineering	2018 - 2022
Data Science Programme - Skill Sequel	2022 - 2023
